NATION COMPONENT OF THE CIRCADIAN CLOCK OF DOWNSTREAM FUNCTION. COMPONENT OF THE CIRCADIAN CLOCK OF CIRCADIAN CLOCK OF CHOCK FUNCTION. EXHIBITS A HIGH AMPLITUDE CIRCADIAN REMAXIMAL LEVELS IN EARLY EVENING. IN CONSTANT DARKNESS OR LICHT, THE AMPLITUDE OF THE RHYTHM DECREASES. TISSUE SPECIFICITY: EXPRESSED ONLY IN THE PHOTORECEPTORS RETINA. EXPRESSION IS CONTROLLED BY THE RETINAL CIRCADIAN SEMILARITY: BELONGS TO THE CCR4/NOCTURIN FAMILY.	eceptors; Med-8962150; J.C.; Dovel vertebrate circadian clock-regulated	ated) t sequence u t annotation t annotation ge 1) (RM1). lawed frog). ata; Craniat a; Mesobatra	PRT	AL	HEMA MAPB ALC1 ACDS C114 UBP4 UBP4 MAP4 ARP_f PEX6 LRG1 ZAN_H

Submitted (OCT-1999) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: COMPONENT OF THE CIRCADIAN CLOCK OR DOWNSTREAM EFFECTOR OF CLOCK FUNCTION. EXHIBITS A HIGH AMPLITUDE CIRCADIAN RHYTHM WITH MAXIMAL LEVELS IN EARLY EVENING. IN CONSTANT DARKNESS OR CONSTANT LIGHT, THE AMPLITUDE OF THE RHYTHM DECREASES (BY SIMILARITY).

-i- SIMILARITY: BELONGS TO THE CCR4/NOCTURIN FAMILY.

Submitted (JAN-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: HELICASE; HAS ATPASE ACTIVITY.
-!- SUBCELLULAR LOCATION: Nuclear (Potential).
-!- SIMILARITY: BELONGS TO THE HELICASE FAMILY. SKI2 SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rowen L.,

Biophys. Acta 1079:57-64(1991).

11 FUNCTION: REPAIRS OXIDATIVE DNA DAMAGES IN VITRO. MAY HAVE A ROLE IN PROTECTION AGAINST CELL LETHALITY AND SUPPRESSION OF MUTATIONS. REMOVES THE BLOCKING GROUPS FROM THE 3' TERMINI OF THE DNA STRAND BREAKS GENERATED BY IONIZING RADIATIONS AND BLEOMYCIN.

12 CATALYTIC ACTIVITY: The C-O-P bond 3' to the apurinic or apyrimidinic site in DNA is broken by a beta-elimination reaction, leaving a 3'-terminal unsaturated sugar and a product with a

IN PROTECTION AGAINST CELL LETHALITY AND SUPPRESSION OF MUTATIONS.
REMOVES THE BLOCKING GROUPS FROM THE 3' TERMINI OF THE DNA STRAND
BREAKS GENERATED BY IONIZING RADIATIONS AND BLEOMYCIN.
IN CATALYTIC ACTIVITY: The C-O-P bond 3' to the apurinic or apyrimidinic site in DNA is broken by a beta-elimination reaction, leaving a 3'-terminal unsaturated sugar and a product with a terminal 5'-phosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-NOV-1991 (Rel. 20, Created)

            FUNCTION: Responsible for the hydrolysis of the phosphosphingolipids (IPS), inositol phosphorylecramide (IPC), mannosylinositol phosphorylecramide (MIPS), and mannosyldinositol phosphorylecramide (MIPS)2C). Also active on sphingomyelin, but this activity is probably not physiologically relevant. CQFACTOR: Magnesium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the mouse CD40 receptor associated protein CC (CRAP). CRAP is a functional protein capable of interacting with the cytoplasmic domain of CD40 and/or other receptors of the tumour necrosis CC factor (TNF) receptor superfamily such as CD30 and TNF receptor I, where CC the protein has no homology to TNF receptor associated factor (TRAF) CC proteins. The CD40 binding proteins can be used as modulators of the CC the signalling pathway, especially to diagnose and treat TRAF-related, CC CD40-related, NF-kappaB related and/or Jun (kinase)-related diseases, CC and for the improvement of anti-tumour diseases. Diseases which may be CC and for the disease. The proteins can be used to sensitize tumour cells to anti-tumour graft versus host disease, allergy, CC and autolimnune disease. The proteins can be used to sensitize tumour CC cells to anti-tumour treatments and to screen for compounds which CC interfere with the interaction of the proteins with other protein CC components of the TRAF, CD40 or NF-kappaB related pathway.

```
This sequence represents the human CD40 receptor associated protein CC (CRAP). CRAP is a functional protein capable of interacting with the Cytoplasmic domain of CD40 and/or other receptors of the tumour necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor I, where the protein has no homology to TNF receptor associated factor (TRAF) CC proteins. The CD40 binding proteins can be used as modulators of the CD40 signalling pathway, especially to diagnose and treat TRAF-related, CC CD40-related, NF-kappaB related and/or Jun (kinase)-related diseases, and for the improvement of anti-tumour diseases. Diseases which may be treated include atherosclerosis, arthritis, multiple sclerosis, systemic lupus erythematosus, graft rejection, graft versus host disease, allergy, and autoimmune disease. The proteins can be used to sensitize tumour cells to anti-tumour treatments and to screen for compounds which interaction of the proteins with other protein components of the TRAF, CD40 or NF-kappaB related pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TNF receptor associated factor; TRAF; modulator; signalling pathway; diagnosis; NF-kappaB; Jun; kinase; atherosclerosis; multiple sclerosis; arthritis; systemic lupus erythematosus; graft rejection; allergy; graft versus host disease; autoimmune disease.

                                                                                                             system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polypucleotide of the invention may be used to treat diseases of the peripheral nervous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat disease of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, hamostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

The TopBP protein is useful as an anticancer agent. Top can be used as the target molecule for anticancer agent.

The CALLED Human colon cancer antigens, given in AABS3234 to AABS4006. The CC called human colon cancer antigens can have cytostatic, cardioactive, muscular; CC current colon cancer antigens polynucleotides, and CC can be used in gene therapy. The colon cancer antigen polynucleotides, and CC can be used in gene therapy. The colon cancer antigen polynucleotides, colon cancer antigen polynucleotides, colon cancer and disprostics and research, such as for CC cancer and disprostics of colon disorders, such as colon cancer. The CC polynucleotides may be used in disprostics and research, such as for CC cancer disorders, muscular disorders, reproductive disorders, immune CC system disorders, muscular disorders, reproductive disorders, immune CC gastrointestinal disorders, wounds, renal disorders, infectious CC daaBs4007 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a conjunctive comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent buman cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the topoisomerase II binding protein (TopBP) of
the invention. The TopBP protein is useful as an anticancer agent. TopBP
can be used as the target molecule for anticancer agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 12-13; 28pp; Japanese

                                                       Вb
                                                                                      Qγ
                                                                                                                                                                                                                                                          polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The complete recombinate production of (II) and in reaction of chromosome cand gene mapping, and in recombinant production of (II). The complete recombinate production of (II) and in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasmostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABG22067 standard; Protein; 263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; AAS86254.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2001-639362/73.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drmanac RT, Liu C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HYSE-) HYSEQ INC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                           CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The proper CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful in gene therapy techniques CC (II). (II) is useful in generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC afood supplement. (II) and its binding partners are useful in medical CL imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC and to produce data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO Cast fire wino intent while intents of the invention format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                   Claim 20; SEQ ID No 52427; 103pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess bidinostics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         31-MAR-2000;

AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for human secreted proteins expressed in prostate, and encode the proteins given in AAX11716 to AAX11993 respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene
                                                                                                                                                                                                                     New isolated prostate-derived nucleic acids - used to products which may have cytokine, immune regulatory regulating, anti-inflammatory or tumour inhibition as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation and differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tunour inhibition activity or other activites. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptides can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
